Objective

Internship in Computer Science focused on Software Development

Education

B.A in Psychology, April 26, 2014. Oakland University, Rochester, MI

Useful courses:

- Social psychology.
- Research and Design.
- Positive Psychology

All of my psychology courses emphasized analysis of psychology journals and articles. This is beneficial to the domain of computer science because I can use my programming skills to think of algorithms to construct programs that could apply psychological information or even design programs to test theoretical information. The research and design course focused on:

- Teamwork and Collaboration
- Differing experimental designs
- Groupthink

B.S in Computer Science, degree expected June 2017

- Current GPA 3.34

Related Experience

- Currently participating in TechTown's projects in Detroit.
- Volunteered in Gary Burnstein Community Health Clinic in Pontiac, Michigan. I aided the clinic in completing tasks associated with the Windows operating system and packaging medication.

Computer Knowledge

Operating Systems: Windows, MacOS
Software: Python, HTML, PowerPoint, MS Word and CSS. Currently learning: C ++, JQuery, JavaScript,

Activities

- **Musician:** Played in the Classical guitar ensemble at Oakland University. Pianist that currently studies with Yury Avensov for Music Composition for films and video games. To me, music is equivalent in importance to my computer science skillsets.
- **Art:** My father is a painter and while I grew up he emphasized creativity. As a hobby, I occasionally work on figure drawing, portrait and oil painting. These activities work on awareness, principles of the gestalt, creativity and observational skills.
- **Athletics:** 2006-2010: Participated in Glen Wilson's boxing team and fought in Detroit Golden Gloves and Michigan Jr. Olympics. Won B class 147IB division in Detroit Golden Gloves and 147IB division Michigan Jr. Olympics.
